

Envirothon 2024 – Oral Presentation

Fifth Category: *Renewable Energy for a Sustainable Future*

Scenario:

Your Envirothon team returned to the school on March 8 and was excited about the previous day's competition. During the morning announcements your principal introduced the members of your team. You were congratulated on a job well done and it was announced that you had excelled in the 5th category (Renewable Energy for a Sustainable Future). The Freshman Earth Science teacher heard this announcement. Renewable energy was the topic for next week's lecture. Given the fact that the Envirothon team had done so well in this area of study, they were asked to lecture to the class.

The teacher asked the Envirothon team to make the Earth Science class “Energy Literate” by: Presenting information on the types and use of both renewable and nonrenewable energy. Include the advantages and disadvantages and economics of both.

One school per county will be required to participate in the group presentation. If the school has one team, all five members of the team will be required to participate. If the school has more than one team, members from all of the teams will be required to participate together.

The SWCD employee coordinating the Envirothon for their county will be responsible for selecting the team participating in the presentation. The presentation time will be 5-7 minutes and all team members will be expected to participate. Visual aids of the non-electronic type maybe prepared prior to the Envirothon and used for the presentation.

Good Luck!
